

Bobathon for Z

What to Expect

A hands-on day with IBM Client Engineering —
build something real with your own code.

What is a Bobathon for Z?

A structured 1-day hands-on workshop — part of the IBM CE engagement model:

The Bobathon sits in the middle — hands-on enablement that builds proof and momentum toward a pilot.

Custom Demo	Bob-a-Thon	Pilot
IBM CE builds a tailored demo Uses client's own code & scenarios Integrated with client toolchain Goal: prove Bob works for your stack	1-day hands-on workshop Developers + Client Engineers Guided labs + open experimentation Outcome: functional prototype	Weekly office hours Executive playbacks Business value KPI tracking Quote / proposal based on BVA

What We Can Do Together

Bob helps your teams work with mainframe code in ways that would have taken days — in minutes.

Application Understanding

Generate technical design docs, architecture diagrams, call graphs, and plain-English explanations of any COBOL program. No manual archaeology required.

Impact Analysis

Identify every program affected by a proposed change. Generate a risk-ranked rollout plan and implement updates across the codebase automatically.

Business Rules Extraction

Extract and document the business rules embedded in existing COBOL programs — readable by both technical and non-technical stakeholders.

Refactoring & Service Extraction

Break monolithic COBOL into reusable CICS LINK service programs. Reduce duplication and establish a service-oriented architecture on the mainframe.

Spec-Driven Code Generation

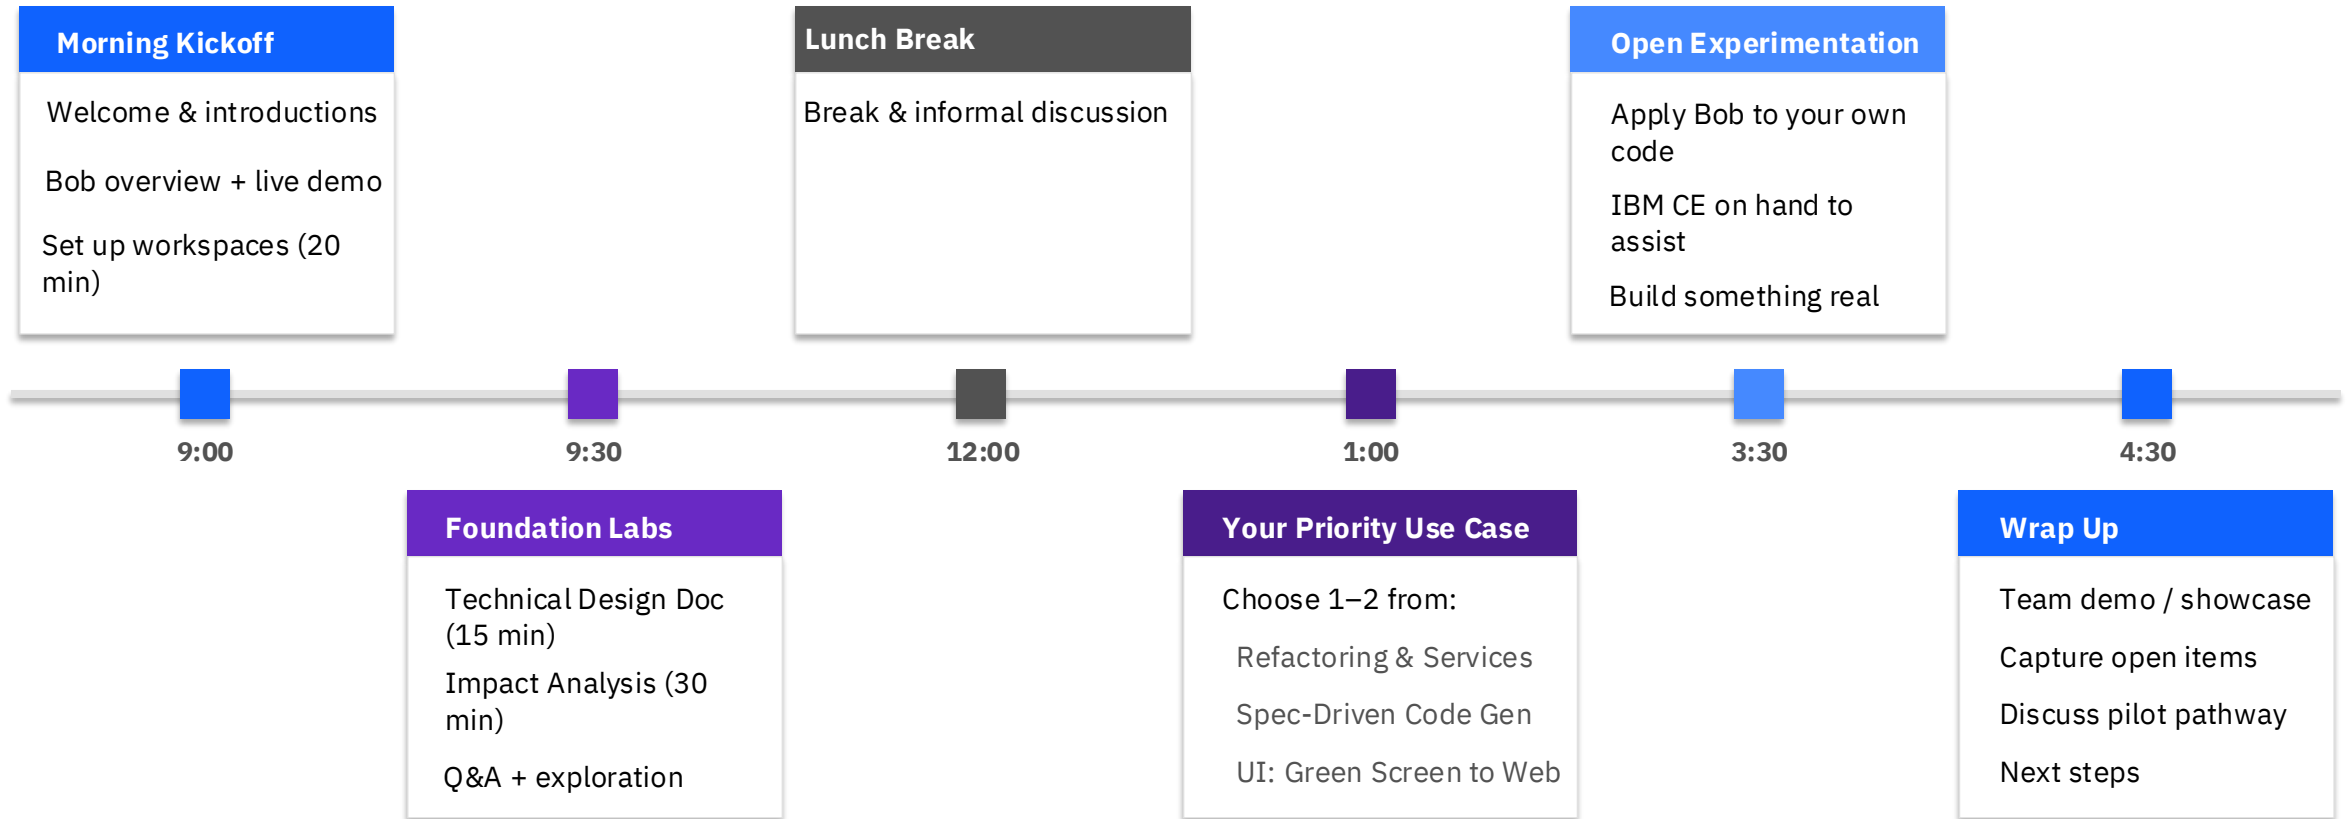

Generate new CICS COBOL programs from a plain-English specification, aligned to your existing coding standards and copybook conventions.

UI Modernization

Transform CICS green screens into a running modern web application — React or Angular frontend with a Spring Boot REST backend — in a single session.

What the Day Looks Like

A structured day of guided labs, hands-on experimentation, and real outputs.

Your Next Steps

After the Bobathon

- You leave with a working prototype
- All generated artifacts are yours to keep
- Open items and follow-ups documented
- Recording of the session available

The Pilot

- Weekly office hours with IBM CE
- Apply Bob to your real priorities
- Track productivity and quality KPIs
- Executive playbacks every 2 weeks

How to Engage

- Talk to your IBM Account team
- Request CE via ISC / DSR
- No cost for the CE engagement
- Start within 2–4 weeks of request
