

An immersive, hands-on AI coding sprint — powered by IBM Bob

A Bobathon is a structured, time-boxed innovation sprint where your teams use IBM Bob to solve real business and technical challenges — guided by IBM experts. The Premium Package for Z gives your mainframe teams specialist AI modes, curated workflows, and prebuilt skills — delivering out-of-the-box value from day one, with no configuration needed.

What Happens

- Kick-off with IBM facilitators and structured problem statements
- Teams pair with Bob on real mainframe code — no synthetic demos
- Guided capability showcases tailored to your Z environment
- Team retrospective and showcase of outcomes
- Readout with actionable next steps and use-case backlog

Curated Mainframe Workflows

- Code explanation — understand complex legacy programs in minutes
- Business rules extraction — surface logic buried in COBOL & PL/I
- Modernisation planning — identify services ready for extraction
- Documentation generation — produce technical & business docs automatically
- Data dictionary — map program variables to business meaning at scale

Prebuilt Skills — Instant Value

- Z Code & Z Architect modes tuned for COBOL, PL/I, HLASM & z/OS
- Mainframe-aware AI chat — ask questions directly about your code
- Impact analysis — understand change risk across your application
- Compliance-ready outputs — audit trails and structured artifacts
- Zero configuration — skills activate instantly, no integration work
